EDUCATION

Texas A&M University — **College Station, TX**
Bachelor of Science in Mechanical Engineering — *Expected May 2028*
College of Engineering — *Cumulative GPA: 3.96/4.00*
Relevant Courses: Thermodynamics, Fluid Mechanics, Solid Mechanics, Materials Science

PROFESSIONAL EXPERIENCE

Dynamic Systems Inc. — **San Antonio, TX**
Project Management Intern — *May 2026 - Aug 2026*

- Automated recurring labor reporting with an Excel Office Script (TypeScript) that consolidates workers across trades and job codes into a weekly summary and chart dashboard, cutting a 2–3 hour manual task to one click and saving ~12 hours over the internship for staffing and budget planning.
- Updated flushing and pressure-testing procedures for 3 mechanical systems (chilled water, sanitary, pneumatic), cross-referencing ASME, OSHA, and local codes to set test durations and pressure criteria, covering 25,000 feet of piping.
- Reviewed multi-system piping layouts, shop drawings, and 3D models and caught 4 interferences before fabrication, avoiding an est. 4 days of rework (~$4,000 in crew labor).
- Designed a field-friendly weld ID system and Excel tracker for 275 welds, flagging 14 nonconformances (5.1%) and tracking 100% to rework closure one week ahead of schedule.
- Performed IFP-vs-IFC Bluebeam takeoffs for a 4-room duct redesign, building a reusable 50+ symbol toolbox shared with PMs; totals supported a change order worth several thousand dollars.
- Authored 8 RFIs resolving spec and code discrepancies, including a louver airflow/pressure-drop conflict resolved with a vendor-backed replacement, avoiding an est. ~$8,000 in crew delay; developed a 17-item condensate piping BOM in Stratus with 10–20% material padding.

PROJECTS

Aggies Create: Triphibian Rover — *Systems Mechanical Design Lead*

- Co-directing a 5-person team building a rover that flies, drives, and floats, setting weekly priorities against a Gantt schedule, reviewing delegated subsystem designs, and managing $1,000+/semester in competitive university funding.
- Designed a custom H-frame tube chassis in SOLIDWORKS and CREO, routing a drive axle through the body, and iterated it through 4 FDM-printed revisions to resolve motor fit, prop clearance, and assembly-access issues.
- Ran 3 staged parametric studies (34 design points) in SOLIDWORKS Flow Simulation optimizing wheel draft angle, cone height, and paddle depth under a fixed-volume buoyancy constraint; optimal cone height cut drag ~17% vs. worst case.

Linkage Toy Design Project (MEEN 210) — *Lead CAD, Team of 4*

- Designed and fabricated a gear-driven Chebyshev lambda linkage in SolidWorks with 2 custom 3D-printed gears, 5 pin-joints, and laser-cut wood structure, validating kinematics across 3 design iterations.
- Applied GD&T tolerance offset and stack-up principles across wood and PLA interfaces, eliminating binding that affected roughly half of the 5 joints in the first iteration.

LEADERSHIP & INVOLVEMENT

Professional Brotherhood of Engineers (PBE) — **College Station, TX**
Recruitment Chair — *Jan 2026 - Present*

- Led a 10-event recruitment cycle and built an Excel applicant database to process 150+ candidates, bringing in a 21-member new class.
- Managed a $2,000 recruitment budget ~10% under cost through advance venue discounts and bulk purchasing, and recouped $100 through a profit-share event.

TECHNICAL SKILLS & AWARDS

Mechanical & CAD Design: SOLIDWORKS, CREO, Rapid Prototyping (FDM), Laser Cutting
Systems & Simulation: SOLIDWORKS Flow Simulation, Python, Excel, Office Scripts (TypeScript), Bluebeam, Stratus
Awards: Fall 2026 Innovation Expo Top New Project
