EDUCATION

Texas A&M University — **College Station, TX**
Bachelor of Science in Mechanical Engineering — *Expected May 2028*
College of Engineering — *Cumulative GPA: 3.96/4.00*
Relevant Courses: Thermodynamics, Fluid Mechanics, Solid Mechanics, Materials Science

ENGINEERING PROJECTS

Aggies Create: Triphibian Rover — *Systems Mechanical Design Lead*

- Led mechanical design for a 6-person team taking a rover that flies, drives, and floats from concept to Top New Project at the Fall 2026 Innovation Expo, by setting weekly Gantt priorities, reviewing delegated subsystem designs, and managing $1,000+/semester in competitive funding.
- Resolved motor fit, prop clearance, fastener access, and battery retention issues across 4 FDM-printed frame revisions, by designing a custom H-frame tube chassis in SOLIDWORKS and CREO that routes the drive axle through the body.
- Confirmed a factor of safety above 40 at max motor torque for a 3D-printed PLA motor cap, with FEA reaction loads matching hand calculations within 3%, by performing hand stress analysis and SOLIDWORKS Simulation.
- Reduced wheel drag ~17% vs. the worst case while holding buoyancy constant, by running 3 staged parametric studies (34 design points) in SOLIDWORKS Flow Simulation on an equation-driven, fixed-volume wheel model.

Linkage Toy Design Project (MEEN 210) — *Lead CAD, Team of 4*

- Helped deliver one of ~3 fully painted, finished toys out of 30 teams at the class Toy Fair, by modeling linkage and frame parts and the full SOLIDWORKS assembly of a hand-cranked Chebyshev lambda linkage and taking it from a laser-cut 2D prototype to a 3D wood/PLA build with printed gears.
- Eliminated excess joint play from the first prototype, producing smooth, controlled motion in the final build, by diagnosing undersized pins and resizing them to fit their holes.

PROFESSIONAL EXPERIENCE

Dynamic Systems Inc. — **San Antonio, TX**
Project Management Intern — *May 2026 - Aug 2026*

- Cut a 2–3 hour monthly reporting task to a one-click update (~12 hours saved over the internship), by building an Excel Office Script (TypeScript) that consolidates workers across trades and job codes into a weekly summary and chart dashboard for PM staffing and budget decisions.
- Tracked 275 welds to 100% rework closure one week ahead of schedule, flagging 14 nonconformances (5.1%), by designing a field-navigable weld ID system and Excel tracker with the QC inspector.
- Caught spec conflicts before equipment was ordered across 8 RFIs, including a louver airflow/pressure-drop mismatch, by reviewing revised drawings against specs and proposing a vendor-backed replacement the engineer approved.
- Supported change order worth ~$14,000, by performing IFP-vs-IFC Bluebeam takeoffs for a 4-room duct redesign, cross-checking 3D models for riser runs, and building a 50+ symbol toolbox shared with PMs for future takeoffs.
- Set test pressures and durations for 3 piping systems (refrigerant, sanitary, chilled water), by updating flushing and pressure-testing procedures against project specs, ASME, and local codes.

LEADERSHIP & INVOLVEMENT

Professional Brotherhood of Engineers (PBE) — **College Station, TX**
Recruitment Chair — *Jan 2026 - Present*

- Led a 10-event recruitment cycle and built an Excel applicant database to process 150+ candidates, bringing in a 21-member new class.
- Managed a $2,000 recruitment budget ~10% under cost through advance venue discounts and bulk purchasing, and recouped $100 through a profit-share event.

TECHNICAL SKILLS & AWARDS

CAD & Prototyping: SOLIDWORKS, PTC CREO, FDM 3D Printing (design for printing), Laser Cutting
Analysis & Simulation: SOLIDWORKS Simulation & Flow Simulation (FEA & CFD), Python, Excel, TypeScript
Awards: Fall 2026 Innovation Expo Top New Project, A&M Engineering Student Scholarship (2025)
